TKO is the solution for servicing vehicles when all keys have been lost, cannot be cloned or the manufacturer doesn't allow programming keys through On Board Programming.

The general trend in automotive transponders is from fixed code to encrypted transponders. Increased restrictions with the On Board Programming procedures make the TKO

your best solution for providing replacement keys for newer automobiles.

TKO will easily add and delete keys for many manufacturers' cars. It will also read the number of keys in memory and reset key related error codes. In addition, the TKO has an OBD11 port location database built in.

TKO plugs right into the OBD port of the vehicle to communicate directly with the on-board computer.

under keys.
